

# Repro directives for Digital printing

- Document size:** ¼ of trimmed size
- Resolution:** 300 DPI
- Data:** Please create your files in CMYK mode.  
To edit your documents, we need all used characters (no True Type Fonts) as well as all placed EPS or TIF-Data and original documents (Freehand) to reserve the opportunity for retouching spreadings, small mistakes, trim edges or other irregularities.
- Plot:** If items are supposed to be plotted, please edit with vector-software (Freehand, Illustrator, etc.). Placed scans cannot be plotted.
- Proof:** Proofs have to be provided with standard control bar (FOGRA media wedge CMYK)
- Storage media:** all established media
- Data transfer:** Our sale informs you about the required access data. A hardcopy of your layout would be useful to check the transferred files and to provide a base for dialogue.
- Service:** If there are still any questions left, don't hesitate to turn to your contact here at K&L. You will be advised on your questions, or connected to our repro department.
